

Ever since I was a child, I always dreamed of having a career in baseball. While most kids dream of being a professional baseball player, I dreamed of working in a front office.

Growing up an avid Yankees fan, I would watch every game. I would analyze player stats and analytics. During the offseason, I would look at players that were free agents and try to determine who the Yankees should sign, as well as which players they should trade for. However, this was just a hobby for me at the time. I never realized that could actually turn into a career focused on player and roster analysis.

I received a BA Mathematics from Quinnipiac University. During this time I took my first stats class, as well as a class called baseball stats. This course was an introductory statistics course that taught concepts using baseball. This was when I realized that my love of math and baseball could come together for a career. I wrote my senior research paper on baseball analytics, specifically, determining the best hitter of all time.

Since my time at Quinnipiac, I continue researching baseball analytics. I am very interested in player performance. I have continued building my skills in the R programming language, as well as advanced metrics, such as wOBA and WAR.

I would love to be a part of the front office for an MLB team. I have a passion for both baseball and statistics, which would make me a great addition to your team. I look forward to discussing how my skills and passion can contribute to your team's success.
